

Grupo Repol has gone a long way since its foundation back in 1975, evolving continuously: updating its High-Tech equipment, developing an own R+D project capable to meet the most specific needs, collaborating in national and international projects, acquiring knowledge year after year, forming a well prepared team, committed with passion to achieve the company's goals, creating new products that diversify its proposal, while offering solutions.

We are experts in formulating and transforming injection and extrusion plastics.

We provide our **Know-how** to make our product different, and we count on a solid structure that allows us to be **flexible** at the time of giving quick response to our customers' needs. With the talent of the people that are part of **Grupo Repol**, we overcome any challenge, and so, our **multiproduct** offer (PC/PBT, PC/ABS, PC/PET, PA/ABS, PA, PP, PC, PBT, ABS, POM, PPS) allows us to evolve in the market and to adapt to any demand.

And this year 2015, It will be a special year definitely, in which **Grupo Repol** turns 40 and, besides, it opens a new headquarters, close, very close to current **Repol**, with new facilities that will allow us to grow up even more and to become a benchmark, a future brand, able to satisfy our customers' needs.

We want to prove it. Come closer to our stand at the next **Equiplast Event** at Barcelona, from **September 30 to October 3**.

Our proposal will surprise you, even ... we'll make you feel it!
